

GENAN SAFE

RUBBER PELLETS

PAT. NO. US 10,857,698 B2

A REVOLUTIONARY AND INNOVATIVE SOLUTION FOR PLAYGROUND BASE LAYERS

OUTSTANDING HIC VALUES

Paramount for playground surfaces is of course that children playing are as safe as possible.

When testing playground surfaces constructed for an approved fall height of 10 ft, **surfaces with base layers made with GENAN SAFE rubber pellets boast the same or better results** compared to surfaces with base layers made with traditional playground buffings.

Tested as part of the GENAN SAFE – PLAY safety surfacing system, the performance of the GENAN SAFE rubber pellets has ensured the IPEMA IMPACT ATTENUATION certificate of ASTM F1292-18e1 compliance.

These excellent results are indeed revolutionary for playground surfacing.
